

What the cow say?

首先打开网址

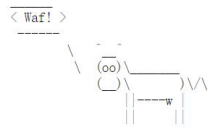

Cowsay What?

cowsay:

看到这尝试输入，发现牛会复制内容，再尝试输入一些特殊字符

Cowsay What?

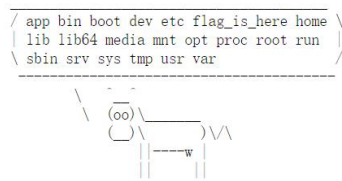

cowsay:

发现会屏蔽&|; flag 等一些字符就换用``来进行注入,

Cowsay What?

cowsay:

发现 flag_is_here,就用``来绕过输入得到

Cowsay What?

cowsay:

```
< flag_c0w54y >
-----
      \   ^__^
       (oo)\_______
            (      )\/)
              ||----w |
              ||     ||
```

再通过 `tac` 得到 `flag`

Cowsay What?

cowsay:

```
/ hgame{C0wsay_be_c4re_aB0ut_ComMand_Inje \
\ ction}
-----
      \   ^__^
       (oo)\_______
            (      )\/)
              ||----w |
              ||     ||
```
